Covered Employment & Wages

By Industry & County

The mission of
The Oregon Employment Department is to

Support Business and Promote Employment

How we accomplish that mission:

- Support economic stability for Oregonians and communities during times of unemployment through the payment of unemployment benefits.
- Serve businesses by recruiting and referring the best qualified applicants to jobs, and provide resources to diverse job seekers in support of their employment needs.
- Develop and distribute quality workforce and economic information to promote informed decision making.
- Provide access to child care that is safe, high quality, and affordable.

WorkSource Oregon Employment Department is an equal opportunity program/employer. The following services are free of cost and available to individuals with disabilities upon request: Auxiliary aids or services, alternate formats and language assistance for individuals with limited English proficiency. To request these services contact your local WorkSource Oregon Center for assistance.

WorkSource Oregón Departamento de Empleo es un programa/empleador que respeta la igualdad de oportunidades. Disponemos de los siguientes servicios para personas con discapacidades a pedido y sin costo: Servicios o ayudas auxiliares, formatos alternos y asistencia de idiomas para personas con conocimiento limitado del inglés. Para solicitar dichos servicios, contáctese con el Centro WorkSource Oregon más cercano a su área.

To Our Readers:

Oregon Covered Employment and Wages provides the most complete summary of Oregon employment and wage information published by the State of Oregon. All businesses covered by Employment Department law report employment and wage information that is tabulated by North American Industry Classification System (NAICS) codes and geographically, statewide and by county.

This publication would not be possible without the cooperation of Oregon employers who supply employment and payroll information to the Employment Department and who respond to its tri-annual industry classification survey. We typically have a more than 95 percent employer response, which helps us guarantee the highest possible quality of information. We thank you for your assistance and participation in our data collection programs.

Material contained in this publication is public and may be reproduced without permission. Please credit ***Oregon Quarterly Census of Employment and Wages***, Oregon Employment Department (OED). Unless stated otherwise, OED is the source for all of the information printed in this publication.

A single publication that would answer all the questions we receive concerning employment and wages in Oregon would be hundreds of pages long. Therefore, this publication contains data tables that provide answers to most commonly asked questions. If your data needs require a format or data elements not published in this document, visit the OED labor market information website at www.qualityinfo.org and look for Covered Employment in the Tools section. Contact our office if you need more assistance.

We encourage those who use this publication as a source of Oregon labor market information to make suggestions for improvements. **Please direct your comments to: Oregon Employment Department, Workforce and Economic Research, QCEW Program, 875 Union St. NE, Salem, OR 97311; or call (503) 947-1248 (in Salem) or 1-800-262-3912, ext 7-1248.**

Nature and Limitations of the Data

The information published in *Oregon Covered Employment and Wages* is based on unemployment insurance tax reports submitted quarterly by employers subject to Employment Department law. Employment is reported by each firm for each month using the payroll period that includes the 12th of each month. Wages are reported for the entire quarter. For example, if a company pays its employees twice a month (for example, on the 15th and the 30th) the employment reported would be the number of employees who worked during the first payroll period of each month. The total wages reported would be the sum of both pay periods for each of the three months in the quarter. Employment and payroll data are ordinarily classified on the basis of the primary business activity and physical location of the employer in Oregon.

Employers operating at more than one location in Oregon must report employment and payroll by each location, and each location is classified according to its primary activity and physical location. This detailed level of reporting makes it possible to identify and publish employment and wages in the area in which the work takes place and where economic impact of the jobs is the greatest.

Summary level employment and payroll data in this publication are based on county and NAICS codes (North American Industry Classification System, 2012 edition) as assigned by the Oregon Employment Department. Employment Department law regarding confidentiality of information collected through unemployment insurance tax reports does not allow us to publish employment, wage or other data that may be identified with an individual employer or employee.

Two changes that impact how we can publish data or data available to be published took effect in 2005. The law governing what we can publish was changed to allow us to publish the number of establishments in an industry regardless of how many establishments there are in that industry. Previously, if there were fewer than three establishments, we could not publish any information. Employment and wage data for those industries where there are fewer than three establishments is still classified as confidential.

The second change has to do with state employment data and home care workers (see section on changes in unemployment insurance coverage). Adding home care workers into the state worker totals has a significant impact on the count of state workers and their wages. (Most home care workers are part-time positions.) A more accurate calculation of the number of state workers and their wages can be made by subtracting out the employment and wages reported under NAICS industry 624120 from statewide totals.

Coverage

Data presented in this report include employment and wages covered by Oregon Employment Department law and by the program of Unemployment Compensation for Federal Employees (UCFE). Employment and wage data on interstate railroad workers, who are covered under a separate unemployment insurance law administered by the

Railroad Retirement Board, are not included in this report. Also excluded from the report are:

1) Self-employment.
2) Agricultural labor performed for a farm with a quarterly payroll of less than $20,000 or not employing at least 10 persons in each of 20 separate weeks during any calendar year.
3) Domestic service in a home, sorority or fraternity, providing the quarterly payroll at no time exceeds $1,000.
4) Casual labor not in the course of an employer's trade or business.
5) Service performed as an officer or member of the crew of any American vessel primarily engaged in interstate, foreign, or high seas navigation, which does not maintain an office within Oregon from which the operations of the vessel are regularly managed and controlled, and service performed on any vessel of foreign registry. Officers and crews of vessels engaged in inland navigation on the Willamette and Columbia Rivers are covered.
6) Service performed by a person in the employ of a son, daughter, or spouse, and service performed by a child under the age of 18 in the employ of his father or mother.
7) Service performed by certain part-time, irregular and emergency employees of state or local government.
8) Service performed by elected officials.
9) Service by an appointed policymaking official of state or local government provided he or she works less than eight hours a week.
10) Service performed by an individual in the delivery of newspapers or shopping news.
11) Service performed by a real estate broker, real estate salesman, real estate agent, insurance agent, insurance solicitor or securities salesperson to the extent that compensation is solely by commission.
12) Service performed by an individual or partnership in the distribution of petroleum products with remuneration for service primarily consisting of the difference between the amount the individual pays or is obligated to pay for the petroleum products and the amount the individual receives.
13) Commission sales of home improvements and in-home sales of consumer goods.
14) The 1999 Legislature passed legislation that impacted a certain segment of the fishing industry. Effective October 23, 1999, House Bill 3308 excluded from unemployment insurance fishing services performed by workers on boats with crews of less than 10 individuals where the payment is based on the share of the catch.
15) Wages paid to corporate officers of closely held family corporations *may* elect to exclude from UI coverage those corporate officers who are directors of the corporation, have a substantial ownership interest in the corporation and are members of the same family.

Time Series Analysis

Limiting Factors in Year-To-Year Comparisons

Probably the most valuable use of the data printed in this publication is the ability they give the user to observe year-to-year trends of Oregon employment. However, there are certain restrictions that make strict year-to-year comparisons misleading or impossible. Technical changes in the unemployment insurance program, changes in the industrial classification system, or OED's ongoing review of assigned industry and location codes can sometimes cause the appearance of gains and losses in employment and wage tables. Such changes do not accurately reflect changes in the structure of Oregon's economy and as such may limit the legitimacy of year-to-year comparisons of data. This should be kept in mind when analyzing employment and payroll trends over many years.

Noneconomic Code Changes

The primary causes of noneconomic changes in employment and wages are industry or county reclassifications and/or changes in the level of employer reporting. Since these changes are not directly attributable to economic activities, they are referred to as non economic changes. Summary tables of noneconomic code changes are made available at the back of this publication.

An annual refiling survey that reviews industry, location and other demographic identifiers is the major source of noneconomic code changes. One-third of all Oregon employers with more than three employees are surveyed each year with the changes incorporated in the publication the following year.

Beginning with the 1998 survey cycle, the selection criteria for the tri-annual survey of employers was changed. The criteria for selection is now based on the sixth and seventh digits of the Federal Employer Identification Number (EIN) assigned to each employer. Studies done by the Bureau of Labor Statistics (BLS) in conjunction with the states determined that using these two digits of the EIN resulted in a statistically valid random sample of employers' current industry classification. An added benefit to those employers doing business in multiple states is that they receive survey forms only once every three years rather than some survey forms from different states each year (if the industrial activity for the company differed from one state to another).

Changes in the level of detail reported by some employers is the other primary cause of noneconomic employment and/or wage variations. Beginning in 1989, BLS, in conjunction with the states, initiated the Business Establishment List (BEL) project to obtain a more accurate representation of employment at the local level. As a result, employers that operate in more than one location and have at least 10 employees outside their primary location are required to report employment and payroll by separate location. When the county or industry code of the individual location is different than the master account, the effect on the data is the same as the industry reclassifications described above.

The incorporation of establishment based reporting was, for the most part, a one-time, two-year process. Thus, 1989 and 1990 had a greater than usual number of employment and payroll shifts that were due to reclassifications.

Changes in Unemployment Insurance Coverage

The following is a list of coverage changes with the year such changes were made effective. Unless noted, changes became effective January 1.

1936 Oregon covered employment data included only employment and payrolls of private industry employers hiring four or more persons.

1956 Coverage was extended to private firms hiring two or more employees and to employees of federal government installations.

1958 State government workers were added to covered employment totals.

1960 Coverage was extended to all private industry employers with one or more employees.

1972 Employees of nonprofit institutions other than religious and primary and secondary schools, share-of-the-catch fishermen, employees of commercial plants engaged in handling, grading, shipping, etc., of farm commodities, and faculty members of Oregon higher education were covered.

1974 Coverage was extended to include local government.

1978 Some farm workers and domestic employees were added as well as coverage of primary and secondary private schools. The coverage of agricultural and domestic employment was limited by size of payroll and/or number of employees. At the same time, the exemption of commission sales was expanded to exclude all in-home sales.

1987 The Oregon Legislature introduced two minor changes. Food product demonstrators not employed by the product manufacturer, distributor or retailer were excluded. Also excluded was transportation performed by motor vehicle for a certified common carrier by any person who leases their equipment to a certified common carrier and who personally operates, furnishes and maintains the equipment.

1989 All churches and religious organizations must provide unemployment insurance for all lay employees. Members of the clergy remain exempt.

1995 Closely held family corporations are granted the option to exclude from UI coverage payments for services to corporate officers who are directors of the corporation, have a substantial ownership interest in the corporation and are members of the same family. Effective with the first quarter of 2004, the legislature expanded the definition of members of the same family.

1996 Members of the clergy and religious organizations, formerly exempt, are now covered beginning with fourth quarter, 1996, quarterly tax reports.

1999 Fishing services performed by workers on boats with crews of less than 10 individuals where the payment is based on the share of the catch are no longer covered beginning with fourth quarter, 1999 tax reports.

2005 Changes made by the Oregon Legislature resulted in the reporting of Home Care Workers (NAICS code 624120) as state employees ***for Unemployment Insurance reporting purposes only***. Inclusion of these workers has a significant impact on state employment statistics (employment and wages).

2008 The payroll subjectivity threshold for new employers was raised from $225 per quarter to $1,000

Size Class Reports

The Size Class Reports include information concerning the number of firms, their employment and total payroll, based on the size of the firm.

The size class ranges used follow the standard size class definitions established by the Bureau of Labor Statistics. Which size class a firm falls into is based on the March employment for that firm.

Two reports follow. Each uses the same database but differs in how the term “firm” is defined. Which report you would use depends on whether the emphasis of your analysis is focused on the economic output of a firm or company as a whole, or the separate and distinct operations of a multiple-location company.

In the first report, the term “firm” is used to define the total employment for each individual unemployment insurance (UI) account number. Sometimes, a large company will obtain a unique UI account number for each separate location or group of locations (i.e., divisions within the company). All employment and payroll will be aggregated to a single location and industry. These tables contain some bias in the data, tending to overstate the data for larger firm size categories and understate it for smaller firm size categories.

The second report uses the term “reporting unit,” a single-location company or each separate physical location of a multiple-location company (i.e., one store in a chain of stores). These tables will tend to have less bias than other size class tables.

Both of the reports provide the following information: 1) the number of firms/reporting units in each size class; 2) the total March employment for those firms/reporting units; and, 3) the total payroll for those firms/reporting units.

The symbol “-“ is used to identify size class ranges where there are no firms/reporting units in that range. The symbol “*” identifies ranges where the information has been suppressed (added to the next smaller range) to avoid disclosure of confidential information. In the latter case, the definition of the published range would then be “redefined” to include the higher ranges that contain nonpublishable information.

COVERED EMPLOYMENT AND WAGES
2011

Summary of Publishable County and Industry Code Changes

Industry / County Code Changes

The following two tables have been prepared to assist those performing time series analysis of changes in employment for specific five-digit North American Industry Classification System (NAICS) codes or by county. Statewide employment and payroll data in this publication are published at the five-digit NAICS level for private-sector employers. To maintain consistency, the summary of industry code changes in the pages that follow are for private-sector employers only.

Changes made to the NAICS or county codes are, generally, introduced with first quarter employment and wage reports and the employment gains and/or losses are based on the prior December employment. If the December employment is zero, January employment for the following (current) year is used to represent the magnitude of the impact of the industry or county classification code change. The tables are generated by calculating the gains or losses made to an industry or county because of a change from one classification to another for any given establishment. For example, if the industry code for an establishment is changed from 11199 to 11121 and the December employment is 35, that change will register as a gain of 35 in industry 11121 and a loss in industry 11199. The tables display the net change of all individual changes.

The constraints of the confidentiality requirements of Employment Department law apply to all aspects of employment and wage data published by the Oregon Employment Department. In industries with fewer than three establishments in a NAICS industry or with one employer representing more than 80 percent of the employment change, that information must be suppressed from the publication to avoid any possibility of confidential information being published or confidential information being derived from published data.

Most industry and/or county code changes are the result of our annual survey of Oregon employers. Beginning with the 1998 survey cycle, the selection criteria for the tri-annual survey of employers was changed and is now based on the sixth and seventh digits of the EIN assigned to each employer. Studies done by the BLS in conjunction with the states determined that using these two digits of the EIN resulted in a statistically valid random sample of employers in terms of their current industry classification. The changes in employment resulting from the impact of the annual survey is more evenly distributed across all industries rather than being concentrated in a particular industry sector each year.

Every five years the federal Office of Management and Budget publishes a revised and updated industry classification manual. Those industries most significantly impacted by the introduction of the 2012 edition of the NAICS manual are highlighted in **bold text** on the following tables.

Salem, OR 97311
(Phone: 503-947-1204)
or email lmipubs.emp@state.or.us

Current labor market information also can be obtained from the OED labor market information home page at ***www.qualityinfo.org***. It contains links to other Workforce and Economic Research pages as well as other sources of labor market information.

Online historical employment and payroll information may be obtained at **www.qualityinfo.org/olmisj/CEP**. Annual tables in spreadsheet format may be downloaded from this site.

Publications available at www.qualityinfo.org:

Oregon Labor Trends
A monthly newsletter analyzing Oregon's current economic and labor force trends. It also includes other employment and economic articles.

Local Labor Trends
A monthly newsletter highlighting economic and employment developments for Oregon's 13 labor market areas.

Employment in Oregon News Release
A monthly news release highlighting recent developments in Oregon's nonfarm payroll and employment. It includes monthly estimates for employment and unemployment and national unemployment rates.

Around the State
A weekly summary of major employment-related news from around the state. The publication is prepared by the Workforce Analysis section and released each Thursday. Distribution is by Internet, mail, FAX or e-mail.

Oregon Labor Force and Unemployment by Area
The table presents monthly estimated labor force, employment and unemployment for the state and local labor market areas. It includes estimates for the current month, previous month and year-ago.

Per Capita Personal Income
A table showing state, MSA and county per capita income. Published annually.

Oregon Wage Information
Provides wage data for hundreds of occupations. It offers a broad spectrum of wage rates from many sectors of Oregon's economy, and is designed to assist job seekers, employers, career planners, industrial developers, and others needing Oregon wage rates for specific occupations. Published annually.

Oregon Careers
This newspaper style publication is a guide to careers in Oregon and includes occupational outlook, pay, courses of study, schools and tips on career planning and job hunting. It is published annually.

Glossary of Commonly Used Terms

The following terms, acronyms, and/or table headings are commonly used in this publication and other publications produced by the Oregon Employment Department. A brief explanation of each is provided below.

Average annual employment is computed by dividing the sum of January through December employment by 12 months.

Average annual payroll is computed by dividing total wages by average annual employment.

Average weekly wage is computed by dividing the average annual payroll by 52 weeks.

The terms **units, reporting units and establishments** are used interchangeably to define the level at which employment and payroll information is reported. For companies that have only one location in Oregon, there would be only one reporting unit. However, there are many companies in Oregon that do business in more than one location in the state. For these companies, the number of reporting units would reflect the number of locations (stores, factories, etc.).

MSA (metropolitan statistical area) is a term that describes a relatively large population and those adjacent communities with a high degree of economic and social integration with the major population nucleus. In Oregon, there are two multiple-county MSA's. The Portland MSA includes Multnomah, Clackamas, Washington, Yamhill and Columbia counties. The Salem MSA includes Marion and Polk counties.

The acronym **NAICS** is used frequently in this publication and many others produced by the Oregon Employment Department. The North American Industry Classification System (NAICS) manual is published by the federal Office of Management and Budget. The manual provides a systematic classification of those economic activities (industries) that, together, define and describe the basic composition of our nation's economy. The first edition of this classification manual was published in 1997. The current edition was published in 2007.

The **Bureau of Labor Statistics (BLS)** is the federal agency that provides funding to states for the purpose of collecting, reviewing and publishing employment statistics. These statistics are prepared by the Bureau for the purpose of meeting the needs of business, labor, Congress and the general public. An important element of the role the Bureau plays is to ensure comparability of data nationwide.
